User Guide

Understanding how your personal skills relate to the career development process is important. The first step is to connect your experiences with sets of skills that transfer across work environments. Self-Portrait helps you identify the skills related to each of your experiences. Ultimately, in Future Frame your skills can be compared to the skills required in occupations.

If there is a gap between the skills you want to use in a future occupation and those that the occupation requires, you have a number of choices. You could choose to further develop the skills, or you could modify your plans to search for other occupations.

Skill-A-Vision provides you with real-world examples of how skills play out in work environments. You can choose to listen or watch as each skill is demonstrated. If you have questions about a certain skill, Skill-A-Vision is the place to turn!

NOTE: Installation instructions for the CD version of Skill-a-Vision can be found in Chapter 1.
